

## Ann Arbor | one actual FW update, no padded trajectory

Only ANN\_TRANSIT\_CHOICE\_FW\_V002 is shown. The old S600 and separate S72 are different demand instances.

Iteration 0 failed the original gap gate; iteration 1 passed. A short curve does not determine geographic adequacy.

Saved engineering result, service date 2026-10-05. Signed floating-point gaps retained; historical scenario, not a current journey planner.
