

Chicago frozen T4 | saved ADMM diagnostic, outer 33-116

84 saved rows: outer 33 is the inherited boundary; 34-36 retain the original coordination; 37-116 use $\alpha = 1.6$.

$\text{Rho} = 0.143572558443 \text{ min/PCE}$ throughout. Original x remains infeasible; primal, dual and stationarity gates fail at 116.

All recorded points are shown. No smoothing or synthetic states. Stationarity has one verified endpoint; no history is inferred.
