

T4 construction: an actual local time-layer excerpt

18 actual arcs; all retained edges among these states and five layers

Structural excerpt selected from records; arrows carry no assigned flow and no optimized path.

Saved bookkeeping examples outside this local excerpt:

Source: source_T01_t5 → nosm:9913425856_t5; t=5→5; cost=0 min

Sink: nosm:261207373_t88 → sink_T01_t169; t=88→169; cost=0 min

Ledger jumps align arrival bookkeeping to H; they are not physical travel or waiting. State spacing is schematic.

Full graph support and nonselected neighbours are omitted from this excerpt; all shown edges are saved input rows.
