

T4 construction: an actual local time-layer excerpt

26 actual arcs; all retained edges among these states and five layers

Structural excerpt selected from records; arrows carry no assigned flow and no optimized path.

Saved bookkeeping examples outside this local excerpt:

Source: source_C04_OD_01_tract2020_42003151700_tract2020_42003980500_t5 → OUT:36036@t5; t=5→5; cost=0 min

Sink: OUT:3537@t59 → sink_C04_OD_01_tract2020_42003151700_tract2020_42003980500_t117; t=59→117; cost=0 min

Ledger jumps align arrival bookkeeping to H; they are not physical travel or waiting. State spacing is schematic.

Full graph support and nonselected neighbours are omitted from this excerpt; all shown edges are saved input rows.
